Voice	Visuals
Somehow we have started using Neurons synonymously with thinking or intelligence ! Delusional!	
If neurons & brain were the necessary component for thinking, Then Plants shouldn't communicate Bacteria shouldn't solve maze A single shouldn't be making decisions. But they do!	A man making photocopies on a photo copier in a room in one end, the other end showing the building's entrance with company name xerox visible, with canon building nearby
Mushrooms' music	Mushroom playing music video 1 & 2 one after other emerge & stay Over layed - emerge trees connected, sharing water Slime solving maze
Meet Jagadish Chandrabose He proved plants, think, react, feel, rememeber He even proved anesthesia affects planst the same way it affects us animals - something that made the western medicine community very uneasy.	Touch me not Crestograph Photos Of The Wave Patterns SCI Card

Let us clarify what thinking is! It starts with awareness, I - A sense of self And manifests firstly, as DNA protecting itself from stray DNAs - Which is essentially immunity - It began with the very first RNA that brought on all other life The second aspect of sense of self is the body awareness - Right from the very first RNAs, they knew their code from other codes, They knew they had to build a protection, hence built cells to house themselves They built leg like flagella using proteins that they stitched together using the amino acids available in the ocean They had sensors on their outer membranes, made use of their flagella like hands, legs & propellers - Surely not without having & remembering the map of their own bodies. The 3rd aspect of sense of self - Ideas of what's safe, unsafe & necessary for life & growth These are the aspects of sense of self we also carry.	vertical eye opening
